Scaling through scrum of scrums

Software Engineering Ethics

1. Confidentiality

* Respect confidentiality of employers/clients regardless of formal agreements.

2. Competence

* Do not misrepresent competence level.

3. Intellectual property rights

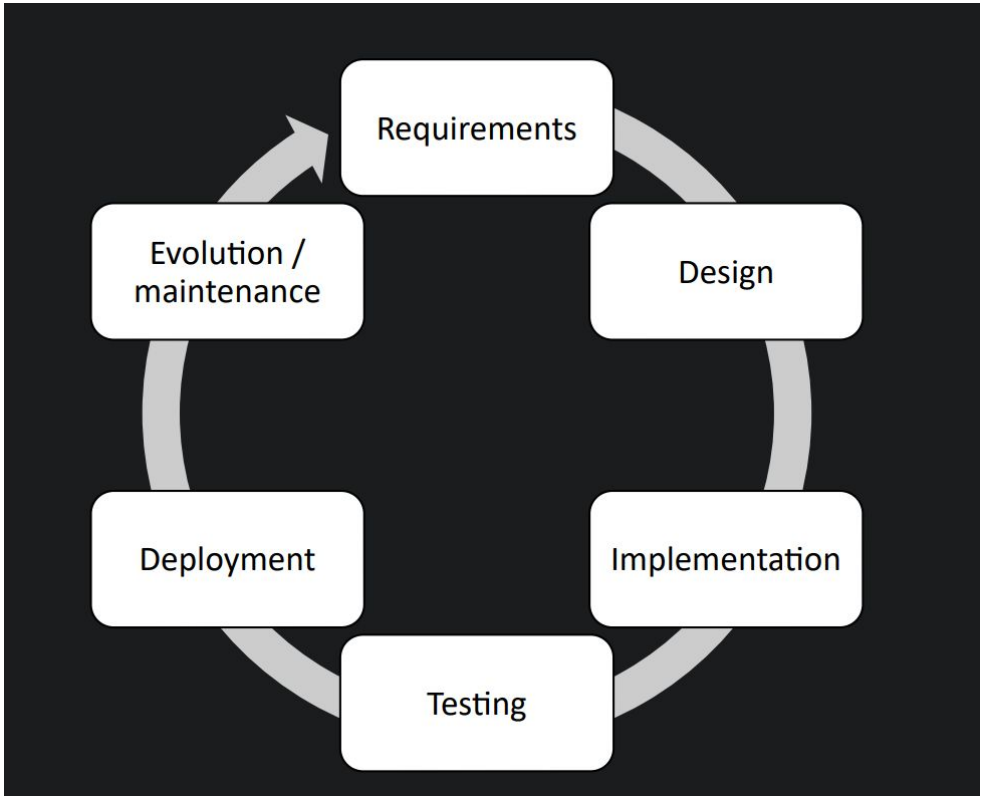

* Be aware of local IP laws (patents, copyright).
* Protect intellectual property of employers/clients.

4. Computer misuse

* Do not use technical skills for misuse (trivial to serious).

SDLC

Requirements
Design
Implementation
Testing
Deployment
Evolution / maintenance

DEFINING REQUIREMENTS

SYSTEM SERVICES

DESCRIPTIONS OF SERVICES THE SYSTEM SHOULD PROVIDE (What it must do)

OPERATIONAL CONSTRAINTS

LIMITATIONS, RULES, AND BOUNDARIES ON ITS OPERATION

REQUIREMENTS ENGINEERING (RE)

ELICITATION

Eliciting needs from stakeholders.

ANALYSIS

Examining requirements for completeness.

DOCUMENTATION

Formalizing requirements specifications.

VALIDATION

Validating requirements meet goals.

The process of finding out, analyzing, documenting and checking these services and constraints is called requirements engineering (RE)
